Reality check

See what is real now, what is still experimental, and what barriers remain before broad everyday use.

Actionable next steps

Move from “cool concept” to practical work in policy, engineering, standards, and public-interest design.

Source-first research

Open reputable references and primary materials so users can verify claims and avoid hype loops.

Career + project angles

Discover pathways for students, switchers, and builders exploring STEM, policy, and civic tech projects.

HOW IT WORKS

- Each entry maps fiction context to real-world status, barriers, and practical next actions.
- Users can browse by Full Ideas, Next Steps, Search, and deep-dive science/method notes.
- References open in-app so readers can validate claims without losing context.

WHY IT MATTERS

- Great for students, educators, and lifelong learners who want evidence, not viral “breakthrough” clips.
- No third-party analytics in the base template; privacy and rights language is user-facing and clear.
- Designed to encourage critical thinking, not passive consumption of speculative tech headlines.
